Refinements to the MFT Procedure

The 5-plus years of teaching Morphogenic Field Technique to nutritionally-minded health care practitioners has been a gratifying journey. In the beginning, it was comforting to realize that MFT could be learned and reproduced with relative ease by anyone who set their mind to it.

Later, we got to hear many of the stories of patient improvement from all over the country—many difficult cases that would not respond to other therapies responded incredibly well once the patient's Morphogenic Field was enlarged and balanced. The Standard Process and Mediherb protocols recommended by the patient's own M-Field have been the key to eliminating years of symptoms on thousands of individuals.

As practitioners have become increasingly familiar with MFT, many of them have made significant breakthroughs of their own. When this happens, the practitioner will often share with us the details of their discovery. Some of the MFT Advanced Procedures that we currently teach were developed based upon feedback from our seminar attendees.

2014 has seen more refinements to the MFT Procedures. These include easy-to-implement improvements to the Express Kit, additional Special Situations vials, more energy enhancements to the Immune Kit, and a new approach to testing PMG's. All this was done to create an even-better way to read the Morphogenic Field.

Special points of interest:

- MFT Intensive Seminar in Hawaii Jan 10-11, 2015!
- Autumn creates new Facebook page.
- Many refinements for improved M-Field Balancing.
- New website coming with more content and videos

MFT Online Community

MFT has entered a new era of communication. Not with human cells this time—but with organisms, such as yourselves. You, the MFT Practitioners and the SP Reps who assist us in spreading the word about health improvement through human energy field enhancement and balance, are helping to move the body of knowledge forward. As you know, MFT could not exist without the great whole food supplements that originate at the SP Organic Farm in Palmyra, WI.

To help spread the word to more people, we are increasing our presence on the web with this newsletter, a new Facebook page, an upcoming website and a new email address to answer clinical questions from past seminar attendees.

MFT co-developer Autumn Smith, NTP has been busy with the online community project. Our new Facebook page is: www.facebook.com/morphogenicfieldtechnique

The website is coming soon at www.morphogenicfieldtechnique.com.

The new email to answer clinical questions only: mfthelp@outlook.com

Frequently Asked Questions

Question: I am not clear about the significance of finding an attraction to the “Morph/Stealth” and “GMO Promoter” vials in the Blue Kit. How does it change the nutritional protocol when these immune-related energies attract?

Answer: It does not change the protocol, but it should change your perspective of the severity of the case.

Recall at the Basic Seminar, we discussed the Morphing Theory of Antoine Bechamp, as well as the theory of microbes hiding in biofilms. Also, we talked about how the GMO Promoter is used to create a “cascade” to alter the genetic make-up of GMO foods and that it does not become inert, thus making possible the genetic alteration of our gut-flora.

Each of these energy-attractions represents a unique challenge to the modern nutritional healer. It makes the case more difficult. It does not change the nutritional protocol, but it does require a new communication with the patient/client about the importance of avoiding GMO foods. The case will be a tough one when all of these elements exist—be patient, persistent, and committed!

Epigenetics versus Genetics – A Mother’s Story

Our clinical story this issue is submitted by **Nutritional Therapist, and Certified MFT Practitioner, Lexi Sandifer of Champion Chiropractic in Lacey, WA.**

As you know, at the core of MFT is the **epigenetic principle** that we influence our genetic expression by when we effectively control our environment. Our genes are not necessarily our fate if we use nature to create a large, balanced M-Field.

This story is a great example of how the MFT premise can play-out in a real-life situation.

Noonan’s Syndrome is a dominant congenital disorder featuring heart defects, cardiomyopathy and other characteristics.

Lexi’s Story:

A 36 year old pregnant, Lupus patient, presented with an unusual situation. She was in the early stages of her third pregnancy. She was concerned about her current pregnancy due to hereditary factors. Her two other children were born with Noonan’s Syndrome. They were not breathing at birth, had several other medical issues, and spent prolonged periods at Children’s Hospital.

Using her MFT skills, Lexi cared for the mother through her delivery. She kept the mother’s M-Field balanced and focused extra attention on the uterine field. SP supplements recommended included Catalyn, Tuna Omega-3, Cod Liver Oil, Trace Minerals B12, Albaplex, Calcium Lactate, Zypan, Ferrofood and Livaplex. By following the MFT procedure, Lexi was able to interpret and respond to the needs of the field with precision.

When the moment of delivery arrived, there was great anticipation regarding the baby’s breathing ability. The mother was overjoyed to hear the sound of her new baby’s cry for the first time. Evidence of Noonan’s was present, yet minimal. To quote Lexi, “With MFT, we made the impossible happen.”

MFT Practitioner of the Quarter

Our MFT Practitioner of the Quarter is Ric Valentine, LAc of Pruneville, CA. Ric has the unique distinction of being the first person to achieve MFT Certification Status in less than one year, a task that usually takes at least twice as long. His dedication to mastering the MFT Basic and Advanced Procedures has been truly inspiring.

His commitment is also evident at seminars he has attended since his certification, where he is extremely generous in sharing his skills with new seminar attendees. When I am demonstrating the technique in class, Ric is always there to assist by pulling the proper Standard Process and Mediherb supplement to speed the testing process.

"I soon found that MFT made it quicker and easier to get information from the patient's body."

Ric Valentine, LAc

Further, Ric has assisted other MFT practitioners in marketing their practice by providing insight and showcasing the promotional materials and websites that he uses in practice.

Ric recalled his first introduction to MFT through Don Lawson, Senior Clinical Consultant with Standard Process N. Calif. "I was studying another muscle testing technique but became disillusioned at the cost and travel required. Don convinced me to try MFT. Soon, I found that MFT made it quicker and easier to great information from the patient's body."

In discussing some of the difficult cases he has handled using MFT, Ric says, "Patients tell me that they feel better than they have in years now that their M-field is large and balanced." A graduate of Stanford University, Ric is an ardent Cardinal and 49er fan.

MFT Co-creator Autumn Smith and I are proud to introduce Ric as our first MFT Practitioner of the Quarter.

Our Favorite SP/MH Products—Ostrophin PMG

The focus of this Quarterly Newsletter is an amazing and versatile Standard Process supplement, Ostrophin PMG, (also known as the bone protomorphogen).

In MFT, we like to check after each procedure to insure that PMG's are included in the protocol when needed. There are three common reasons to test the need for Ostrophin PMG:

1. When the attracted energy is related to bone cells.
2. When there is an immune challenge of any kind. (think WBC production by the bones)
3. When a heavy-metal energy is noted and traced back to the bones.

Recall from the Basic and Advanced Seminars that PMG's play two important roles—the growth factor (which we call the cell "blueprint") and an immune component. Since the bones are responsible for WBC production, the PMG immune component can be a huge factor in healing.

Also, from the Advanced Seminar, recall the importance of Ostrophin PMG in heavy metal detox.

It is easy to see how important Ostrophin PMG can be to Morphogenic Field growth and balance!

Upcoming MFT Events/Seminars

There are three types of MFT Events:

1. **MFT Basic Seminar:** This 8 or 12 hour class introduces Morphogenic Field Technique theory and application. It begins with an explanation of epigenetic theory (the idea that you can control your genetic expression by controlling your environment) and how this “ideal” can be realized in a practical way. Next, we teach the 27 steps of the MFT Basic Procedure. Finally, as time allows, we develop nutritional and herbal protocols for seminar attendees using Standard Process and Mediherb supplements.
2. **MFT Advanced Seminar:** This 8 or 12 hour class is the next step in learning about the huge amount of relevant health information available from the M-Field. In this class, we teach 45 additional procedures that can be performed on the patient/client prior to performing the MFT Basic Procedure. The value of our Advanced Procedures is to “smoke out” additional health challenges that may not be revealed at first glance, usually based upon their case history or other clinical evidence. Case management is another component of the Advanced Seminar.
3. **MFT Intensive Seminar:** This 16 hour class over two days teaches both the Basic and Advanced Procedures in one weekend. It is appropriately named, since it can be quite “intense” to be given that much information in one weekend.

MFT Microtesting Seminar, taught by Don Lawson, Senior Clinical Consultant at Standard Process of Northern California, is being presented at the Toal Conference Center in Alameda, CA. on Sept 13, 2014, 8:30-5:30. \$95.00 with organic lunch and manual provided. To register, email Don directly at theworkingbody@gmail.com.

New Areas Hosting MFT Events

MFT in Hawaii: We are excited to present a mid-winter Intensive Seminar in Hawaii on January 10-11, 2015.

Over the next year, we plan to present MFT in several new venues including Las Vegas, Sacramento, Albuquerque, Minneapolis, and South Central California.

Contact your Standard Process Rep if you are interested in having an MFT Event in your area.

Coming this fall, **there will be a series of MFT Events in the New England Area.**
